DETAILED ACTION

Claim 1 has been canceled and claims 9-24 have been entered by the preliminary amendment filed March 23, 1998. Claims 2-24 are pending in the application.

Statutory Double Patenting

Claims 2-8 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 2-8 of prior U.S. Patent No. 5,601,990. This is a double patenting rejection.

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970). A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Obviousness-Type Double Patenting

Claims 9-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 5,601,990 and claims 1-8 of

Art Unit: 1642

U.S. Patent No. 5,731,159. Although the conflicting claims are not identical, they are not patentably distinct from each other; the instant method claims differ from the patented ST receptor assays in explicitly reciting the use of a negative control sample in a parallel negative control assay, however, negative controls are conventional in the assay art, and it would have been obvious for one of ordinary skill in the art to have included a negative control in the patented assays. The instant kits would also have been obvious over the patented ST receptor assays because it is conventional to assemble assay reagents into kit form for the recognized advantages of improved standardization and efficiency.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim Rejections - 35 USC § 112, second paragraph

Claims 2-18 and 21-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1642

Claims 2-8 are vague and indefinite because they depend from canceled claim 1.

Claims 9-18 and 21-24 are confusing because it is not clear whether the negative control sample is simply a sample of normal colorectal tissue, normal tissue from some other source, or a sample known to contain no ST receptor protein.

Conclusion

No claim is allowed.
